

Talisman Energy improves content accessibility with SeeUnity

Integration and synchronization improves information sharing

An exploration company headquartered in Calgary, Canada, and with three main operating areas in North America, the North Sea and Southeast Asia, Talisman Energy identified ways to better share enterprise content across its global network of employees and partners.

Talisman Energy's technicians and field engineers generate important records, such as well files, critical to managing energy assets throughout their lifecycles. Talisman relies on OpenText eDOCS to ensure data is protected and can be made available. On demand access to this data are used to make real time business and technical decisions, from environmental surveys and expenditures, to safety management and regulatory compliance.

Remote bandwidth and performance issues began to disrupt content dependent decision-making processes in the field. To improve accessibility and guarantee timelier access, employees improvised workarounds, such as storing duplicate documents on local hard drives. Talisman manually tracked these processes – which helped ensure security and compliance, but inflated cost and complexity. Talisman Energy turned to Concerta Consulting to address the causes and effects of slow system performance. After a review of operations, Concerta recommended using SeeUnity to integrate eDOCS with Microsoft SharePoint.

IMPLEMENTING INTEGRATION AND SYNCHRONIZATION

Concerta proposed improving performance by using SharePoint to provide field access to eDOCS content. "SharePoint and eDOCS was the ideal situation," said Terry Slabe, Senior Consultant at Concerta. "SeeUnity provides a set of out-of-the-box modules for embedding eDOCS controls and features directly into the SharePoint user experience." Working directly with SeeUnity,

Concerta delivered a live proof-of-concept integration in just 2 weeks. After using one of SeeUnity's enterprise integration modules to help

TALISMAN
ENERGY

- Industry: Energy (Exploration)
- Employees: >2,800
- Repository size: >10,000,000 documents
- Branch offices: 12
- SeeUnity products used:
 - Enterprise Integration for SharePoint
 - Synchronize Express

CONCERTA

From concept to completion Concerta helps clients to define and create relationship-centric Enterprise Content Management (ECM) solutions that fully integrate accounting, sales & marketing, and operations. Employing a long tenured staff of senior ECM experts from offices in Calgary and Vancouver, Concerta supports clients from Vancouver to Yellowknife and Dallas to Wyoming.

Talisman Energy improves content accessibility with SeeUnity

remote users consume eDOCS content, Concerta then addressed how remote users contribute content back into the central eDOCS library – using a synchronization module from SeeUnity.

Synchronize Express is a lightweight module for mapping folders between a central content management system, and remote SharePoint servers. "As a content synchronization application, Synchronize Express is ideal," said Mr. Slabe. "It can be installed and configured in minutes. This allowed us to roll out the module quickly across remote servers."

From a usability standpoint, the module is invisible; users simply place content in a specified SharePoint directory. Synchronize Express automatically profiles, copies and synchronizes content from the local SharePoint directory out to Talisman's eDOCS library in Calgary, Canada.

HOW INTEGRATION HAS HELPED TALISMAN ENERGY

Whether they are working in remote offices, or in the field, Talisman users can more easily browse, search and access eDOCS content, via SharePoint. Third-party virtualization tools are no longer needed to upload content; users simply move documents into preconfigured "hot folders" on SharePoint. The performance of the integrated products is measurably improved over native client access.

"We're pleased with the results that Concerta has delivered," says Robert McLauchlin, Supervisor, Document Management at Talisman Energy. "SeeUnity's products are easy and intuitive for users, while protecting content. They are also more efficient and cost-effective at controlling how information is accessed and shared."

Additional SharePoint content filters help focus workers on information that is relevant to their role and department. To address legal restrictions prohibiting the transfer of content from the country of origin, Synchronize Express copies profile "receipts," so that documents can be tracked and accounted for in eDOCS.

Thanks to Concerta Consulting and SeeUnity, Talisman improved the performance and efficiency of their ECM system, while reducing costs and risks.

About SeeUnity

SeeUnity has over 40 combined years of experience with successful integration, migration, synchronization, and mobility of ECM systems. Our products and solutions have helped over 300 organizations globally take control of their ECM systems. For more information about SeeUnity, visit www.seeunity.com
