DATA SHEET

Extend the value of SharePoint by integrating with your other business application

Fusion Content Integration is a highly configurable web-based application used to conveniently bring together all of a user's critical and relevant content into one place. Work from a single UI to dynamically access and manage DMS content relative to your SharePoint site.

Fusion Content Integration - Key Features

- Real-time access to relevant eDOCS content
- Access native eDOCS features: Browse, access, search, manage, and edit content directly from a single UI
- Metadata added to SharePoint index supports advanced searching, refiners, and more
- Customize SharePoint enterprise search displays (Fusion Install includes sample templates)
- Securely surface DM content via Tabs
- Real-time security trimming
- Drag and drop documents between systems
- Copy and move documents between systems
- Email links to documents or email PDFs of documents
- Context sensitive menus offer only relevant actions
- View content and edit with Microsoft Office Online

BUSINESS BENEFITS

- Enable productive collaboration with secure integration
- Work efficiently by accessing all relevant data via a single user interface
- Workflow is streamlined, saving time and speeding up business processes
- Improve adoption by allowing users to interact natively in the DMS (search, edit, create, update metadata, etc.)
- Maintain Information Governance initiatives, keep content in the repository of record, and avoid content duplication
- Connect to most major repositories and ensure scalability

Working Behind the Scenes to Improve Productivity

Echo Content Synchronization

Echo Content Synchronization is an API-based enterprise content synchronization product that enables you to securely connect and synchronize data between SharePoint and your DMS. Automate your team's workflow while maintaining information governance by publishing, bi-directionally syncing, or archiving content across repositories.

Key Features

- Securely sync content from your DMS to SharePoint
- Supports one-way, bi-directional, or archive sync
- Configure administrator or user initiated sync rules
- Advanced mappings for workspaces and metadata
- Configure rules to be initiated based on triggers
- Schedule and automate content syncs
- Auditing, reporting, and error handling
- Automated rule and sync template creation
- Maintain audit and history data
- Delete or replace documents with a link or stub

Business Benefits

- Simplify workflow and improve productivity
- Automate processes to free up valuable IT hours
- Enable secure internal and external content collaboration
- Maintain IG and compliance with full administrative oversight
- Allows users to interact natively in the DMS (search, edit, create, update metadata, etc.)
- Improve adoption by allowing users to work in their system of choice while keeping content synchronized and up to date
- Connect to any of our partner systems to ensure scalability as your organization evolves
- Control and maintain storage costs
