

Fusion Content Integration

Streamline Business Processes, Improve Productivity, & Increase User Adoption

Real-time, secure access across one or many systems from one UI.

Fusion is a highly configurable web-based application used to conveniently bring together all of a user's critical and relevant content into one place. Work from a single UI to effectively govern and manage content by giving users real-time secure access to relevant DMS content across systems.

Alfresco • Azure • Box • Content Server • Documentum • Dropbox • Dynamics • eDOCS Exchange • File Shares • HighQ • iManage • NetDocuments • Office 365 • OneDrive Salesforce • SharePoint • Teams

Use Cases

- ✔ **Support Information Governance & Records Management**
Users action and manage content in their native systems. Keep content in your DMS. Avoid replication of content and maintain RM and IG.
- ✔ **Secure Collaboration**
Simplify workflow and break down data silos with real-time and security trimmed access to systems across your organization. Improve productivity and enhance collaboration efforts.
- ✔ **Extend SharePoint Enterprise Search**
Use Fusion to extend your SharePoint Enterprise search to include all of your repositories and return relevant results all in one place.
- ✔ **Remote Working Support**
Streamline processes by integrating your DMS and external systems. Allow users to view and manage content natively from their other applications from one UI. Real time, dynamically displayed content helps users work more efficiently.
- ✔ **Best-In-Breed Applications**
Increase user adoption and productivity. Users work within their best-in-breed applications of choice with secure access to their other vital systems and content.
- ✔ **Quick Access to Relevant Content**
Streamline processes by integrating your DMS and external systems. Allow users to view and manage content natively from their other applications from one UI. Real time, dynamically displayed content helps users work more efficiently.

Key Benefits

- 🕒 **Save Time and Effort**
Users work efficiently by using Fusion to access all relevant data in real time from their other apps via a single UI. Configure layout and templates based on needs.
- 👤 **Usability**
Allows users to interact natively in the DMS (search, edit, create, update metadata, etc.)
- 🔌 **Connect Your Applications**
Fusion uses native APIs to connect to most major repositories, including: Amazon S3, Azure Storage, Box, eDOCS, File Shares, HighQ, iManage, NetDocuments, Office 365, SharePoint, and more.
- 🔨 **Maintain Governance**
Keep content in your repository of record. Avoid content duplication. Ensure end to end governance using Fusion access with Echo synchronization to changes and new content created back to the DMS.

Features

- Configurable layouts and templates
- Real-time access to ECM and relevant content of choice
- Access native repository features (e.g., check-in or check-out, document versioning, metadata)
- Drag and drop documents between systems
- Copy and move documents between systems
- Email links to documents or email PDFs of documents
- Context sensitive menus offer only relevant actions
- Browse hierarchy, search full text and properties across multiple libraries

Fusion Search for SharePoint

- Customize SharePoint enterprise search displays (Fusion Install includes sample templates)
- Real-time security trimming
- Preview native ECM content
- View content and edit with Microsoft Office Online
- Metadata added to SharePoint index supports advanced searching, refiners, and more

How Fusion Helps Our Customers & Partners

"We're breaking down silos. Giving an executive or a lawyer the ability to quickly research and find information that sets precedents on a very critical decision makes all the difference."

- Michael Burch | Executive Director,
Secure Document Management Services,
Fox Entertainment Group

ABOUT SEEUNITY

Founded in 2004, SeeUnity is the leading provider of API-based content integration and migration products with over 500 customers and 30 partners worldwide. Securely connect, sync, or migrate data across on-premise or cloud-based ECM systems and external applications. SeeUnity's mission is to help organizations simplify how they access, manage, and interact with their enterprise content. With our continuous product innovation, we strive to meet our customers' productivity, efficiency, and modernization goals.
