

Fusion Content Integration

DATA SHEET

Streamline business processes, improve productivity, and increase user adoption

Fusion Content Integration is a highly configurable web-based application used to conveniently bring together all of a user's critical and relevant content into one place. Work from a single UI to effectively govern and manage content by giving users real-time secure access to relevant DMS content across systems.

Fusion Content Integration - Key Features

- Configurable layouts and templates
- Real-time access to relevant eDOCS content
- Access native eDOCS features: Browse, access, search, manage, and edit content directly from a single UI
- Drag and drop documents between systems
- Copy and move documents between systems
- Email links to documents or email PDFs of documents
- Context sensitive menus offer only relevant actions
- Browse hierarchy, search full text and properties across multiple libraries

Fusion Search for SharePoint

- Real-time security trimming
- Preview native ECM content
- View content and edit with Microsoft Office Online
- Metadata added to SharePoint index supports advanced searching, refiners, and more

BUSINESS BENEFITS

- Enable users to work efficiently with real time access to relevant data from other applications
- Save time and effort with configurable layouts and templates
- Improve adoption by allowing users to interact natively in the DMS (search, edit, create, update metadata, etc.)
- Maintain governance, keep content in your repository of record, and avoid content duplication
- Ensure end-to-end governance using Fusion access with Echo Synchronization to changes and new content created back to the DMS
- Connect to most major repositories and ensure scalability

Working Behind the Scenes to Improve Productivity

Support Information Governance & Records Management

Users action and manage content in their native systems. Keep content in your DMS. Avoid replication of content and maintain RM and IG.

Secure Collaboration

Simplify workflow and break down data silos with real-time and security trimmed access to systems across your organization. Improve productivity and enhance collaboration efforts.

Extend SharePoint Enterprise Search

Use Fusion to extend your SharePoint Enterprise search to include all of your repositories and return relevant results all in one place.

Remote Working Support

Streamline processes by integrating your DMS and external systems. Allow users to view and manage content natively from their other applications from one UI. Real time, dynamically displayed content helps users work more efficiently.

Best-in-Breed Applications

Increase user adoption and productivity. Users work within their best-in-breed applications of choice with secure access to their other vital systems and content.

Quick Access to Relevant Content

Streamline processes by integrating your DMS and external systems. Allow users to view and manage content natively from their other applications from one UI. Real time, dynamically displayed content helps users work more efficiently.
