ANAQUA®

Echo Sync for HighQ and WiseTime

DATA SHEET

Eliminate Manual Time Keeping Processes. Integrate HighQ with WiseTime

Already using WiseTime for your automated timekeeping? The HighQ integration for WiseTime utilizes Echo Sync (**Echo**) to further simpify users' workload.

Echo automatically runs in the background on a scheduled basis, syncing posted time entries related to each matter from WiseTime into the corresponding matter iSheet in HighQ.

Additionally, Echo produces summary items in iSheets for each matter, user, or activity, saving users valuable time and effort processing their time and billing information.
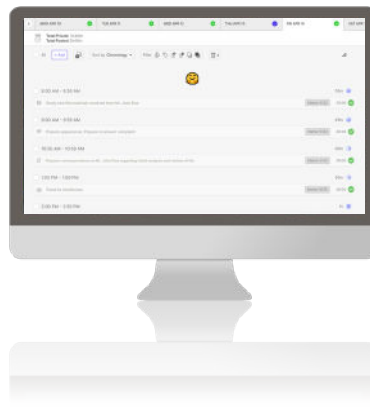

Build in Efficiency – Integrate and Automate

Echo is an API-based enterprise content and records synchronization product designed to automate processes, support internal and external collaboration, and help maintain content governance.

Allows Users to Focus on Mission Critical Work, Not Administrative Tasks

As users post time related to specific matters within WiseTime, color coding alerts them to the status of an item:

Grey = the sync is processing
Green = the item is synced to HighQ

Once an item is posted and synced, a user cannot modify that entry.

IT Control and Full Administrative Oversight

IT admins can monitor all sync rules from within the Echo Management Studio. Configure email notifications for admins to receive metadata sync confirmations and error reports. Retain audit and history data with detailed reporting.

Echo is Now Available as a Hosted Solution

SeeUnity offers secure Azure hosted locations in the US and Europe.

Eliminate manual processes, double entry, and errors with a scheduled and automated sync

Provide automated item summaries for each matter within HighQ

Improve user efficiency and reduce workload

Secure and configurable system integration
